

Project Executable Files

Date	04july2026
Team ID	xxxxxxx
Project Name	Human Development Index (HDI) Prediction Using Machine Learning
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	
2	README / Setup Guide (instructions to run the project)	
3	requirements.txt / package.json / dependency file	
4	Database schema / seed files (if applicable)	
5	Environment configuration file (.env.example or similar)	
6	Deployed application URL (if hosted)	
7	APK / Executable binary (if applicable for mobile/desktop apps)	
8	Dockerfile / Containerization config (if applicable)	
9	Test files and test results	
10	Demo video or walkthrough (if required)	

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

HDI_Prediction_Project/

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Not Hosted (Running Locally)
Login Credentials	Not Required
Platform / Hosting Provider	Local Flask Server (VS Code)
Repository Link	<i>(Paste your GitHub Repository URL here)</i>
Demo Video Link	<i>(Paste your Google Drive/YouTube link here)</i>

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites

Python 3.12 or later

Visual Studio Code

pip (Python Package Manager)

Step 1

Clone or download the project from GitHub.

git clone <your-github-repository-link>

Step 2

Open the project folder in Visual Studio Code.

Step 3

Install the required packages.

pip install -r requirements.txt

If requirements.txt is unavailable, run:

pip install flask pandas numpy matplotlib seaborn scikit-learn

Step 4

Ensure the following files are present:

app.py

model.pkl

hdi_dataset.csv

templates/index.html

Step 5

Run the Flask application.

python app.py

Step 6

Open the browser and visit:

http://127.0.0.1:5000

Step 7

Enter the following values:

Life Expectancy

Mean Years of Schooling

Expected Years of Schooling

Gross National Income Per Capita

Click Predict.

The application displays:

Predicted HDI Score

HDI Category (Very High / High / Medium / Low)

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Application runs only on the local	Can be deployed on Render,
2	Prediction accuracy depends	Use a larger and updated dataset
3	Uses Linear Regression only	Advanced algorithms

Conclusion

The Human Development Index (HDI) Prediction Using Machine Learning project is fully functional. All executable files, source code, documentation, and testing reports are organized properly. The application can be run locally using Flask and successfully predicts the HDI score and corresponding category based on user input. This aligns well with the SmartBridge project executable files template.
