

Project Initialization and Planning Phase

Date 04 july 2026

Team ID xxxxxx

Project Name Human Development Index (HDI) Prediction Using Machine Learning

Maximum Marks 3 Marks

Define Problem Statements (Customer Problem Statement Template):

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A government policy maker	Estimate the Human Development Index (HDI) of a country	Manual analysis is slow and requires processing large amounts of data	HDI depends on multiple indicators such as life expectancy, education, and income	Frustrated by the time and effort needed to obtain accurate predictions
PS-2	A researcher or data analyst	Analyze and compare the development level of different countries	Existing methods are time-consuming and not automated	Data preprocessing and statistical calculations require technical expertise	Overwhelmed by the complexity of the analysis
PS-3	A student learning machine learning	Build a system to predict HDI using socio-economic indicators	I have limited knowledge of model deployment	Integrating machine learning models with web applications is challenging	Motivated to learn but uncertain about implementation
PS-4	A social development organization	Identify regions that may need additional development support	Accurate prediction and trend analysis are difficult using manual methods	Multiple development factors must be considered together	Concerned about making informed decisions efficiently

Conclusion

The Human Development Index (HDI) Prediction Using Machine Learning project addresses the challenges faced by policymakers, researchers, students, and development organizations by providing an automated system that predicts HDI using machine learning. It reduces manual effort, improves efficiency, and supports better decision-making through fast and reliable predictions.
